- DeFi and Crypto Mining Enthusiast.
- Background in Computer Information Systems and Interactive Media Design - Web.
- In the Blockchain Industry since 2014.
- Currently serving as Business Development Manager in a Bitcoin mining company.

**Hennadii
Ahanesian**

INTRODUCTION

Cryptocurrency Mining is a very competitive business. The hardware frequently moves around the globe due to always changing price of electricity and regulations in different jurisdictions. Hardware owners sometimes need to sell their miners when it is not reasonable to move it.

PROBLEM

Currently sale of used equipment takes a lot of risk and effort, done mostly through communications channels like Telegram or Discord. Such sources often have possibilities of being scammed.

SOLUTION

D-Markt is powered by Ethereum Blockchain Decentralized Marketplace for used Mining Hardware. It offers safe environment for deals and trustworthy experience.

PRODUCT OVERVIEW

Reputation System

Choose out of the most trusted sellers based on their reputation.

1

Tokenized Ownership

Tokenize the hardware and transfer to the customer to prove the purchase.

2

Escrow

Payment released only after the deal is completed and both parties satisfied.

3

Reputation System

A platform with a reputation system ensures that buyers can review the entity selling equipment and evaluate potential risks of doing business with this entity or individual.

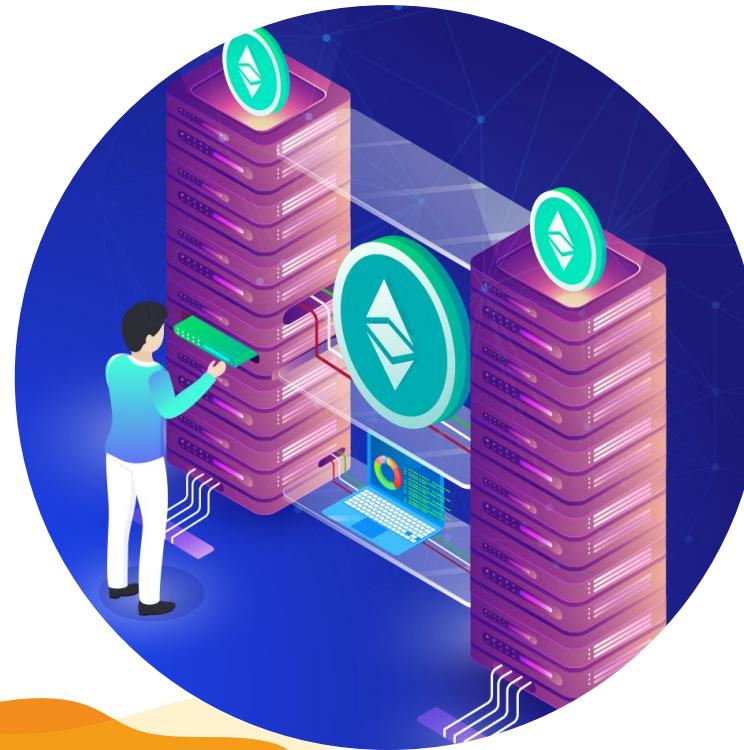

Buyers can rate sellers after the sale completed and let other people know about the experience.

Tokenized Ownership

Each unit of hardware listed on the DAPP is tokenized to represent it on chain and allow for greater transparency, history of ownership and transferability of the asset between parties.

Information available on the chain for other potential buyers includes: Date and time of the mint and all the previous owners since the mint, for each specific miner that was tokenized on the platform.

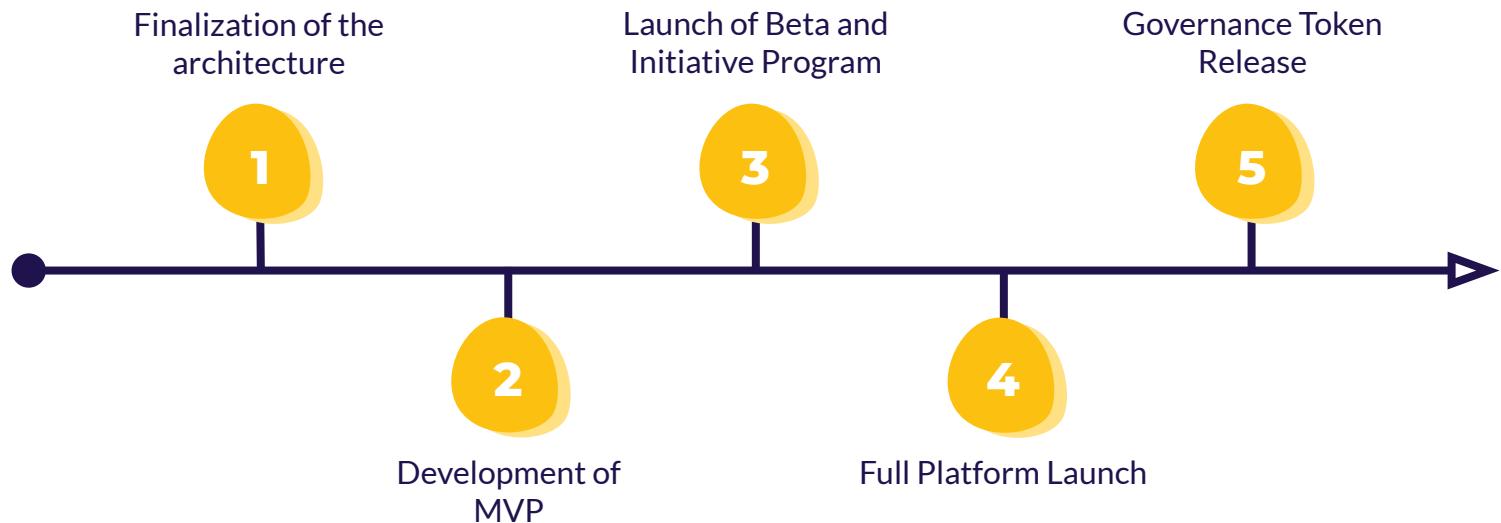

Escrow

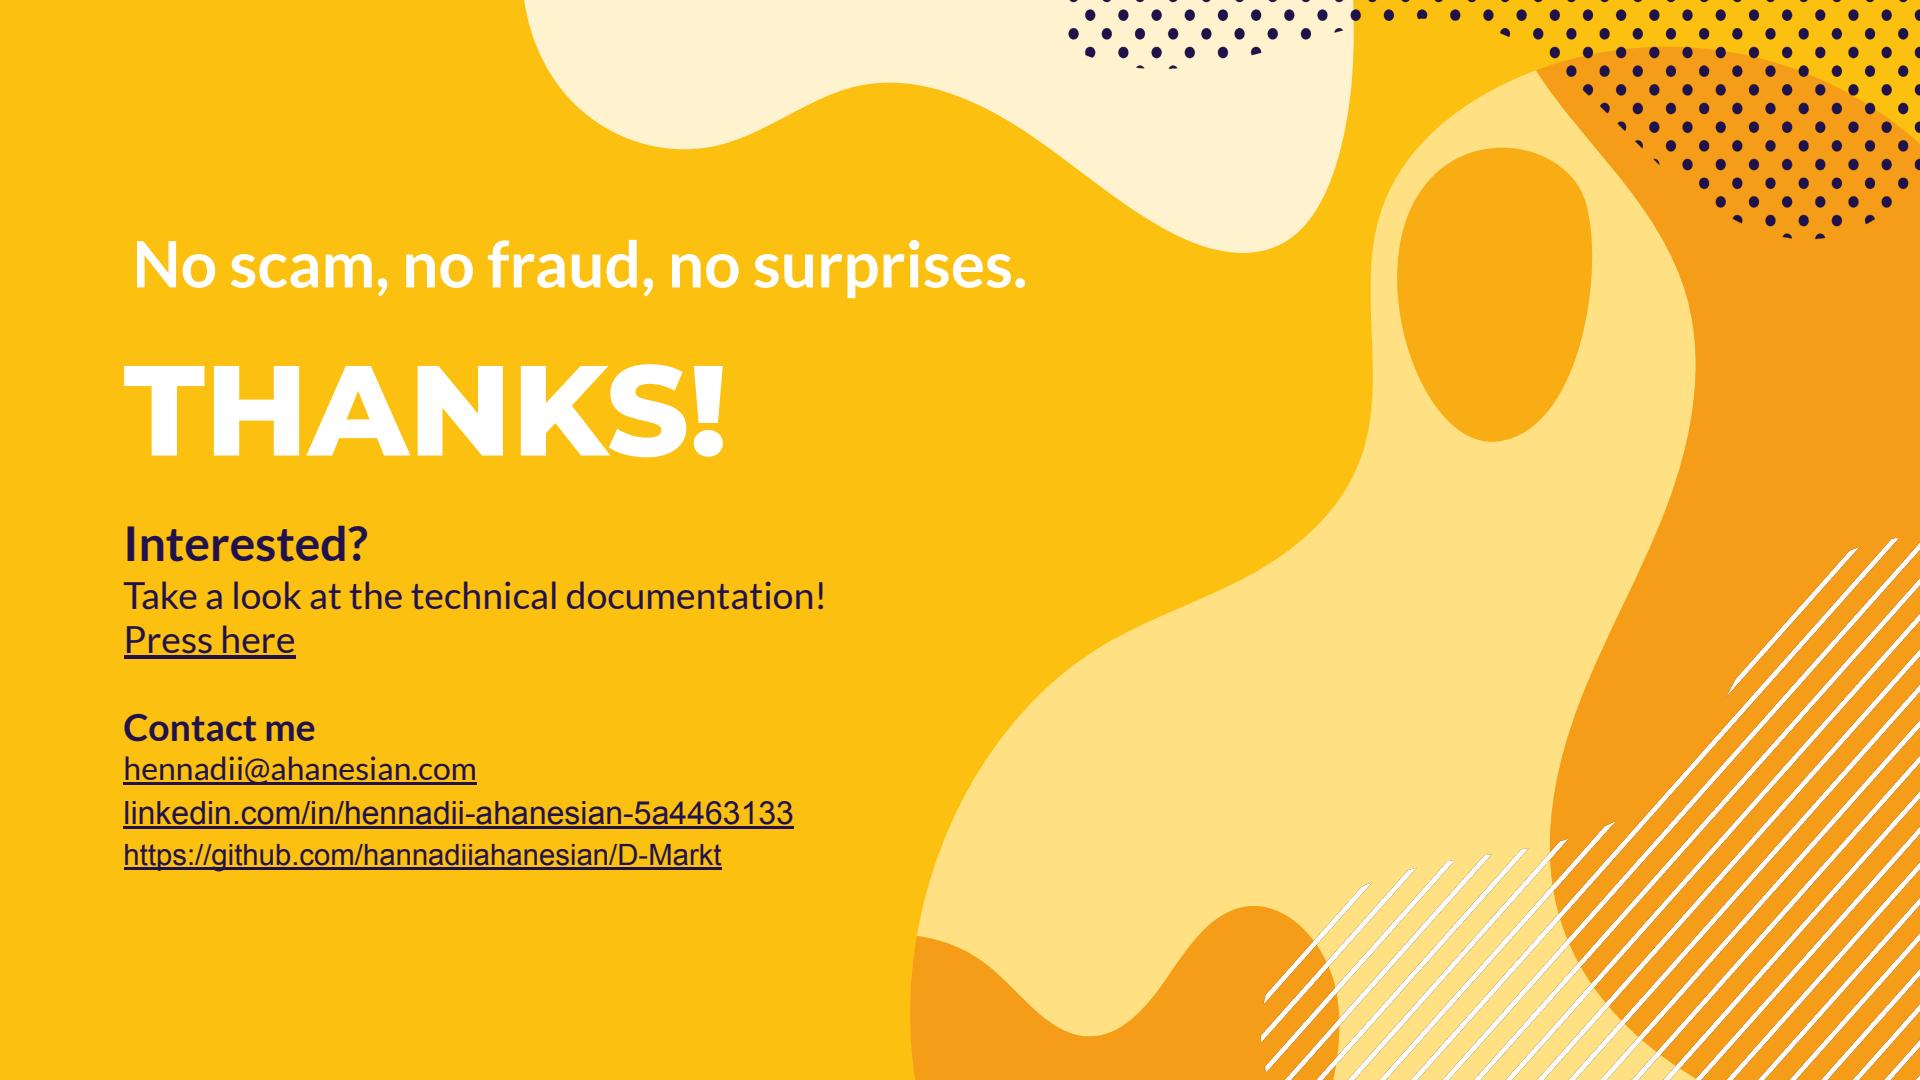

Decentralized Escrow service for every transaction on the platform ensures that the deal goes exactly as expected by all parties.

In case of a dispute an arbiter assigned by the Governance Committee might intervene to resolve the dispute.

Roadmap

No scam, no fraud, no surprises.

THANKS!
